## SUMMARY

Cybersecurity-focused Computer Science undergraduate skilled in threat detection, log analysis, intrusion detection systems, and network security monitoring. Familiar with SIEM concepts, ISMS fundamentals, MITRE ATT&CK framework, IOC analysis, and anomaly detection using Python, Linux, Wireshark, and Splunk (Basic). Seeking an entry-level Cyber Threat Hunting / SOC Analyst role.

## EDUCATION

**B.Tech., Computer Science and Engineering in specialization with Cybersecurity** June 2022 – May 2026
SRM Institute of Science and Technology, Ramapuram
Relevant coursework: Cryptography and Network Security, Introduction to Digital Forensics

## TECHNICAL SKILLS

**Cybersecurity:** Threat Hunting, SIEM Monitoring, Log Analysis, IOC Analysis, Incident Response, IDS, Network Traffic Analysis, Risk Assessment, Security Controls, ISMS Fundamentals, MITRE ATT&CK
**Networking:** TCP/IP, VLAN, OSPF, Network Segmentation
**Tools and Platforms:** Linux, Wireshark, Splunk (Basic), Google Chronicle (Basic), Python, MySQL, Cisco Packet Tracer

## CERTIFICATIONS

- Google Cybersecurity Professional Certificate – Google (Coursera), 2026

## PROFESSIONAL EXPERIENCE

**BHEL - Bharat Heavy Electricals Limited, Chennai: Student Intern** July 2025 – September 2025

- Designed and simulated a multi-department enterprise network using VLAN segmentation to enhance security.
- Configured inter-VLAN routing and OSPF for efficient communication.
- Implemented SSH secure access and DHCP-based IP allocation.
- Applied port security (sticky MAC) to prevent unauthorized access.
- Analysed network configurations to identify vulnerabilities and improve security posture.

## ACADEMIC PROJECTS

**Hybrid AI-Based Intrusion Detection System for IoT Networks Using Federated Reinforcement Framework** Jan 2026 – April 2026
Developed an AI-driven IDS using Deep Neural Networks (DNN) to detect malicious and anomalous IoT network traffic.

- Analysed network traffic patterns and attack behaviors to identify cyber threats in distributed IoT environments.
- Implemented data preprocessing, feature extraction, and classification pipelines for real-time intrusion detection.
- Integrated Federated Learning and Reinforcement Learning concepts to support adaptive and privacy-preserving threat detection.
- Simulated detection of DDoS attacks, botnet activity, and unauthorized access using behavioral anomaly analysis.
- Improved anomaly detection accuracy by analysing high-dimensional network traffic and reducing false positives in intrusion classification.
- Tools & Technologies: Python, TensorFlow/Keras, Deep Learning, Federated Learning, IoT Security

**Fraudulent Transaction Detection in UPI Payment Portal** Jan 2025 – April 2025
Developed an anomaly detection system using Hidden Markov Model (HMM) to identify fraudulent transactions.

- Modelled user transaction sequences to detect deviations from normal behavior.
- Implemented probabilistic risk scoring for real-time fraud detection.
- Applied machine learning techniques to enhance financial security systems.

**Log Analysis for Threat Detection (Mini Project)** Dec 2024
Performed log and network traffic analysis to identify suspicious patterns and anomalies.

- Used Wireshark to inspect packets and simulate detection of potential security events.
